### **Public Notification**

It has come to our attention that the wastes from the workshops are not properly segregated and they are even found mixed with used lubricants and glasses during collection, which pose significant risks both to the environment and the collection vehicles. The waste mixed with lubricants can easily combust and also can damage the collection vehicles. As a measure to address the potential risk, the domestic waste from the workshop will be collected two times a week with proper segregation. However, workshop owners are responsible for arranging the transportation for the disposal of non-recyclable waste such as glasses, filters, and other wastes to the designated site at the landfill, with prior approval from Phuentsholing Thromde.

Therefore, we would like to kindly request all the workshop owners under Phuentsholing Thromde to comply with this notification. Our collection vehicles shall collect the wastes only if they are properly segregated. Furthermore, all the workshop owners are requested to maintain the highest standards of cleanliness in the premises. Failure to comply with this notification will result in taking action as per the environmental regulations.

We solicit cooperation from all the stakeholders to create a clean and better living environment.
